PROFESSIONAL SUMMARY

Experienced Software Engineer specializing in front-end web application development. Strong expertise in JavaScript, HTML5, CSS3, SCSS, Twig, responsive design, and accessibility remediation, with professional experience using React, Tailwind CSS, Vue.js, and AI-assisted development tools. Experienced collaborating with Agile teams to build, enhance, troubleshoot, and support enterprise web applications. Additional experience contributing to applications built with PHP, Java, JSP, and Servlets.

TECHNICAL SKILLS

Core Technologies: JavaScript (ES6+), TypeScript, HTML5, CSS3, SCSS, Twig
Front-End Libraries & Frameworks: React, Next.js, Tailwind CSS, jQuery
Web Technologies: REST APIs, JSON, HTTP, AJAX, Responsive Design, WCAG/ADA Accessibility
Additional Experience: Vue.js, PHP, Java, JSP, Servlets
AI-Assisted Development: Cursor, Claude (Agents & Skills) for AI-assisted debugging and code analysis
AI Features: Vercel AI SDK, Claude API (streaming responses, system prompts)
Development Tools: Git, Bitbucket, GitHub, Vercel, Eclipse
Databases: Microsoft SQL Server, MySQL
Methodologies: Agile Scrum, SDLC, Code Reviews, Production Support

PROFESSIONAL EXPERIENCE

Software Engineer – Front-End | Augeo Affinity Marketing | Boca Raton, FL | Jan 2020 – Jul 2026

- Developed and enhanced customer-facing enterprise web applications using JavaScript, HTML5, CSS3, SCSS, Twig, and Tailwind CSS.
- Built reusable front-end components and Twig templates that improved maintainability and accelerated feature delivery.
- Reviewed enterprise websites for ADA compliance, remediated accessibility issues identified during accessibility audits, and implemented front-end enhancements to improve WCAG conformance.
- Collaborated with product owners, UX designers, business analysts, QA engineers, and back-end developers throughout the Agile software development lifecycle.
- Supported feature development and troubleshooting involving React, PHP, Java, JSP, and Servlets while working primarily on front-end technologies.
- Resolved production issues, implemented new features, and improved application performance, usability, and accessibility.
- Leveraged Cursor and Claude (Agents & Skills) to analyze code, troubleshoot complex issues, investigate support tickets, and improve development efficiency.

Software Engineer – Front End | Deluxe Corporation | Boca Raton, FL | Oct 2015 – Jan 2020

- Maintained and enhanced web applications using React JS
- Built and updated UI components with HTML, JavaScript, jQuery, CSS3, and SCSS issues, and improve application performance.
- Learned and gained practical exposure to back-end concepts using Java, JSP, Servlets, and Spring Boot.
- Supported integration of REST APIs by working alongside back-end developers
- Analyzed front-end code to identify and resolve UI bugs
- Assisted the back-end team with troubleshooting and understanding production issues
- Performed unit testing to ensure code reliability and quality
- Investigated production issues and application defects in a fast-paced environment
- Resolved bugs and defects to maintain application stability
- Participated in sprint planning sessions within an Agile environment
- Conducted and participated in code reviews
- Contributed to continuous testing and application enhancement efforts

Front-End Developer | Destination Rewards, Inc. | May 2013 – Oct 2015

- Built, maintained, and enhanced webpages for the organization
- Converted static PSDs into interactive web pages using HTML, CSS, and JavaScript
- Enhanced interactivity and dynamic behavior of web pages using jQuery
- Worked with JSP and Servlets to support back-end functionality
- Analyzed front-end code to identify and resolve UI bugs
- Analyzed back-end code to identify and resolve server-side issues
- Performed unit testing to ensure code quality and reliability
- Collaborated with Business Analysts to define and document project requirements
- Proposed solutions for reported issues and bugs in collaboration with Business Analysts

Earlier Experience | MotionPoint • Akamai Technologies • Applied Card Systems | 2007 – 2013

- Developed and supported enterprise, multilingual, and responsive web applications while building a strong foundation in front-end development, debugging, and software engineering best practices.

SELECTED PROJECTS

AI Interview Coach | ai-chat-neon-ten.vercel.app | github.com/riazmasud/ai-chat | 2026

- Built and deployed a streaming AI chat app (Next.js, TypeScript, Tailwind CSS, Vercel AI SDK, Claude) with a server-side route streaming replies to a React UI, with loading, retry, and Stop controls.
- Hardened the public LLM endpoint against abuse and runaway cost: request validation, server-owned prompts, capped replies, per-IP rate limiting, and a spend-capped API key with alerts.
- Built an accessible chat UI: labeled controls, ARIA live regions that announce streaming state once, managed focus, and keyboard-only operation; tested with VoiceOver and Lighthouse.

EDUCATION

Bachelor of Science in Computer Information Systems | Florida Atlantic University
